**Listing of Claims:**

Claims 1-31 (Canceled).

Claim 32 (new): A polymer blend comprising (i) a crystalline polypropylene continuous phase having a weight average molecular weight, and (ii) an at least partially crystalline copolymer dispersed phase having a weight average molecular weight lower than the weight average molecular weight of the crystalline polypropylene continuous phase, the dispersed phase comprising propylene and ethylene and/or one or more unsaturated comonomers, the dispersed phase prepared using a metallocene catalyst.

Claim 33 (new): The polymer blend of Claim 32 in which the crystalline polypropylene continuous phase is a homopolymer.

Claim 34 (new): The polymer blend of Claim 32 in which the crystalline polypropylene continuous phase is a copolymer.

Claim 35 (new): The polymer blend of Claim 32 in which the dispersed phase is a copolymer of propylene and ethylene.

Claim 36 (new): The polymer blend of Claim 32 in which the dispersed phase is characterized as (A) comprising at least about 88.4 weight percent of units derived from propylene and about 7.3 to 11.6 weight percent of units derived from ethylene, and (B) having an

Appl. No. 10/613,374  
Docket No. 1998B037A/2  
April 22, 2004 Amdt. and Reply to Office Action

X-ray diffraction pattern that reports more gamma-form crystals than a comparable copolymer prepared using a Ziegler-Natta catalyst.

Claim 37 (new): An article of manufacture comprising the polymer blend of

Claim 32.

Claim 38 (new): An article of manufacture comprising the polymer blend of  
Claim 36.

Claim 39 (new): An article of manufacture made from a polymer blend comprising at least one polymer (A) and at least one polymer (B), polymer (A) comprising about 5 to about 99 weight percent of the blend, and polymer (A) comprising a copolymer of about 96 to about 88.4 weight percent of propylene derived units and about 4 to about 11.6 weight percent of ethylene derived units, and polymer (A) is further characterized as having an X-ray diffraction pattern that exhibits more gamma-form crystals than a copolymer comparable in all respects except that it is prepared with a Ziegler-Natta catalyst, and polymer (B) comprising a thermoplastic polymer other than polymer (A).

Claim 40 (new): The article of Claim 39 in the form of a film.

Claim 41 (new): The article of Claim 39 in which polymer (A) comprises about 30 to about 98 weight percent of the blend.

Claim 42 (new): The article of Claim 41 in the form of a film.

Claim 43 (new): The article of Claim 39 in which polymer (A) comprises about 60 to about 98 weight percent of the blend.

Claim 44 (new): The article of Claim 43 in the form of a film.

Claim 45 (new): The article of Claim 39 in which polymer (A) comprises about 75 to about 99 weight percent of the blend.

Claim 46 (new): The article of Claim 45 in the form of a film.

Claim 47 (new): An article of manufacture made from a polymer blend comprising at least one polymer (A) and at least one polymer (B), polymer (A) comprising about 5 to about 99 weight percent of the blend, and polymer (A) comprising at least about 65 weight percent of units derived from propylene and at least about 4 weight percent of units derived from a comonomer selected from the group consisting of ethylene and an unsaturated monomer other than ethylene, and polymer (A) is further characterized as having an X-ray diffraction pattern that exhibits more gamma-form crystals than a copolymer comparable in all respects except that it is prepared with a Ziegler-Natta catalyst, and polymer (B) comprising a thermoplastic polymer other than polymer (A).

Claim 48 (new): The article of Claim 47 in the form of a film.
